

WESTWATER

PROJECT ANNOUNCEMENT

TasWater - Branxholm Electro-chlorination Tasmania

WestWater have been awarded a contract with TasWater to design, construct, install and commission an Electro-chlorination System in Branxholm, Tasmania.

The chlorine batch and dosing system will be housed in a 3.6 metre prefabricated transportable building, and will include:

- Grundfos recirculation and dosing pumps;
- Hyprolyser iSEC Electro-chlorinator with a 50L brine tank and a 300L product tank;
- Dosing panel;
- Free chlorine analyser sample system;
- And various other mechanical and electrical components.

All aspects of the design, construction, installation and commissioning of the Electro-chlorination System will be completed in accordance with the Contract and Australian Standards.

The project is expected to reach Practical Completion by February 2020
